

Fork Positioner for Forklift

Fork Positioner for Forklifts - A fork positioner is a device made out of top quality materials designed to be able to withstand the most difficult operations and work environments. This piece of equipment could enable the individual driving to be able to operate the forks hydraulically without leaving the seat. Side shifting models have the added ability to laterally position the arms or the entire load in order to facilitate much more precise carrying and placement in a quicker and much more effective method.

The fork pocket is quite unique and could enable the person operating it to be able to securely sway the blades into position without any worry of damaging the positioning cylinders. This could allow the operator the alternative to be able to perform simultaneous or independent fork movement, depending on the requirements of the job. For most forklifts with non-OEM carriages, complete carriages are necessary. Standard OEM carriages can be converted into blade positioners on available units.
